</table>

\(\checkmark\) = frequent hand-washing; avoid touching face, eyes. Soap and water or alcohol hand rub available.

\(\checkmark\) = Wipe surfaces contaminated by respiratory secretions or prior hand contact by patients or public.

\(\checkmark\) = Use for hands on patient contact or contact with contaminated surfaces that cannot be wiped or which have not been cleaned yet.

\(\checkmark\) = Use gown if close contact (≤ 3ft) of infected patient, for cleaning exam rooms. Gown or apron should be disposable or cleaned/laundered using standard and contact precautions. g = If entering a contaminated exam room before time for adequate air changes (red warning sign on door). Apron may be used for cleaning as an alternative.

\(\checkmark\) = a. N95 mask is preferred if available for healthcare providers. Any mask should be used with eye protection.

\(\checkmark\) = b. N95 with eye protection MUST be used for aerosol-generating procedures.

\(\checkmark\) = c. If N95 is not available for direct patient care, a tight-fitting surgical mask may be used.

\(\checkmark\) = d. Mask should be worn if room must be entered while infected patient is present or before adequate air changes to clear air. This is 20-30 minutes in negative pressure exam room or 2-3 hours in regular exam room. (Red infection control sign should be posted until this time has passed.)

\(\checkmark\) = Goggles/face shield/eye shield ? = Consider if very close contact with coughing patient (within 3 feet or direct manual contact) not behind shield, screen or window.

\(\checkmark\) = e = aerosol-generating procedures = Bronchoscopy, NP suctioning, endotracheal intubation, sputum induction, positive pressure ventilation by face mask, etc.

\(\checkmark\) = f = Use gloves and other PPE for standard precautions indications just as in pre-pandemic use

\(\checkmark\) = g = Only if infection is isolated/unusual in WHO Stage 5 pre-pandemic; not for WHO Stage 6 pandemic

\(\checkmark\) = a = N95 mask is preferred if available for healthcare providers. Any mask should be used with eye protection.

\(\checkmark\) = b. N95 with eye protection MUST be used for aerosol-generating procedures.

\(\checkmark\) = c. If N95 is not available for direct patient care, a tight-fitting surgical mask may be used.

\(\checkmark\) = d. Mask should be worn if room must be entered while infected patient is present or before adequate air changes to clear air. This is 20-30 minutes in negative pressure exam room or 2-3 hours in regular exam room. (Red infection control sign should be posted until this time has passed.)

\(\checkmark\) = Goggles/face shield/eye shield ? = Consider if very close contact with coughing patient (within 3 feet or direct manual contact) not behind shield, screen or window.

\(\checkmark\) = e = aerosol-generating procedures = Bronchoscopy, NP suctioning, endotracheal intubation, sputum induction, positive pressure ventilation by face mask, etc.

\(\checkmark\) = f = Use gloves and other PPE for standard precautions indications just as in pre-pandemic use

\(\checkmark\) = g = Only if infection is isolated/unusual in WHO Stage 5 pre-pandemic; not for WHO Stage 6 pandemic

\(\checkmark\) = h = N95 mask is preferred if available for healthcare providers. Any mask should be used with eye protection.

\(\checkmark\) = i = N95 with eye protection MUST be used for aerosol-generating procedures.

\(\checkmark\) = j = If N95 is not available for direct patient care, a tight-fitting surgical mask may be used.

\(\checkmark\) = k = Mask should be worn if room must be entered while infected patient is present or before adequate air changes to clear air. This is 20-30 minutes in negative pressure exam room or 2-3 hours in regular exam room. (Red infection control sign should be posted until this time has passed.)

\(\checkmark\) = l = Goggles/face shield/eye shield ? = Consider if very close contact with coughing patient (within 3 feet or direct manual contact) not behind shield, screen or window.

\(\checkmark\) = m = e = aerosol-generating procedures =Bronchoscopy, NP suctioning, endotracheal intubation, sputum induction, positive pressure ventilation by face mask, etc.

\(\checkmark\) = n = f = Use gloves and other PPE for standard precautions indications just as in pre-pandemic use

\(\checkmark\) = o = g = Only if infection is isolated/unusual in WHO Stage 5 pre-pandemic; not for WHO Stage 6 pandemic

\(\checkmark\) = p = h = N95 mask is preferred if available for healthcare providers. Any mask should be used with eye protection.

\(\checkmark\) = q = i = N95 with eye protection MUST be used for aerosol-generating procedures.

\(\checkmark\) = r = j = If N95 is not available for direct patient care, a tight-fitting surgical mask may be used.

\(\checkmark\) = s = k = Mask should be worn if room must be entered while infected patient is present or before adequate air changes to clear air. This is 20-30 minutes in negative pressure exam room or 2-3 hours in regular exam room. (Red infection control sign should be posted until this time has passed.)

\(\checkmark\) = t = l = Goggles/face shield/eye shield ? = Consider if very close contact with coughing patient (within 3 feet or direct manual contact) not behind shield, screen or window.

\(\checkmark\) = u = m = e = aerosol-generating procedures = Bronchoscopy, NP suctioning, endotracheal intubation, sputum induction, positive pressure ventilation by face mask, etc.

\(\checkmark\) = v = n = f = Use gloves and other PPE for standard precautions indications just as in pre-pandemic use

\(\checkmark\) = w = o = g = Only if infection is isolated/unusual in WHO Stage 5 pre-pandemic; not for WHO Stage 6 pandemic

\(\checkmark\) = x = h = N95 mask is preferred if available for healthcare providers. Any mask should be used with eye protection.

\(\checkmark\) = y = i = N95 with eye protection MUST be used for aerosol-generating procedures.

\(\checkmark\) = z = j = If N95 is not available for direct patient care, a tight-fitting surgical mask may be used.

\(\checkmark\) = { = k = Mask should be worn if room must be entered while infected patient is present or before adequate air changes to clear air. This is 20-30 minutes in negative pressure exam room or 2-3 hours in regular exam room. (Red infection control sign should be posted until this time has passed.)

\(\checkmark\) = | = l = Goggles/face shield/eye shield ? = Consider if very close contact with coughing patient (within 3 feet or direct manual contact) not behind shield, screen or window.

\(\checkmark\) = } = m = e = aerosol-generating procedures = Bronchoscopy, NP suctioning, endotracheal intubation, sputum induction, positive pressure ventilation by face mask, etc.

\(\checkmark\) = } = n = f = Use gloves and other PPE for standard precautions indications just as in pre-pandemic use

\(\checkmark\) = } = o = g = Only if infection is isolated/unusual in WHO Stage 5 pre-pandemic; not for WHO Stage 6 pandemic

\(\checkmark\) = } = p = h = N95 mask is preferred if available for healthcare providers. Any mask should be used with eye protection.

\(\checkmark\) = } = q = i = N95 with eye protection MUST be used for aerosol-generating procedures.

\(\checkmark\) = } = r = j = If N95 is not available for direct patient care, a tight-fitting surgical mask may be used.

\(\checkmark\) = } = k = Mask should be worn if room must be entered while infected patient is present or before adequate air changes to clear air. This is 20-30 minutes in negative pressure exam room or 2-3 hours in regular exam room. (Red infection control sign should be posted until this time has passed.)
