RE: New Students

DATE: June 20, 2016

With students graduating and new students arriving, this is a reminder for you to provide a list of new hire/work-study students, as well as new staff, working within your lab(s). They will need to provide documentation of a current Tetanus vaccine. They would also need proof of their Hepatitis B series and Blood Borne Pathogens training if they will be working with human blood serum or fluid or human tissue or cell lines. Also, agent and procedure specific training is to be completed and documented by you.

Your assistance will greatly be appreciated and please let us know if you have any questions. Thank you.
